11	red	R+	

parameter	spec.	parameter	spec.
batt. voltage	DC384V	rate Torque	160 N.m
rated power	50kW	Peak torque	420N.m
peak power	120kW	Insulation class	H
rated speed	3000r/min	protection	IP67
peak speed	7000r/min	cooling method	Liquid cool
peak current	450Arms	Weight	70Kg

coolant flow	12L/min	water channle volume	0.95L
coolant type	auto antifreeze	max. pressure	< 200Kpa

Technical details and Requirement

- unmarked size shall be executed according to GB/T1184-k with position difference
- main parameters of motor are shown in Table 1 and definition of low voltage signal shown in Table 3
- electrical insulation resistance of motor to Ground is ≥ 20 M ohm at 500V winding to Ground withstand voltage 2000V ,no strike for 1 min. leakage current less than 100mA
- Thermistor model : TR/09-G034 / NTC
- pressure resistance of cooling system is 0.2 Mpa , 5min , no leakage
- user installation bolts are tightened according to specified mentioned
- direction of motor rotation is shown in figure 1
- effective length of the spline is not less than 37 mm.
- initial angle of the division is adjusted to 180 degree
- surface of motor is sprayed with XD103 aluminium paint and shaft extension and mating surface are rust-proof
